

11.1 Instructions on how to use the editable file

The annotations should be placed using the linked open file. Use only the text area designated in the *.ai file as well as the DM Sans Medium font. The proportions should be determined on the basis of the height of the shield in the Signet, which is the 'B' module. The base line of the first word of the Signet should be 0.41 B from the bottom edge of the Logotype. Each subsequent line should be placed with an interline of 0.32 B.

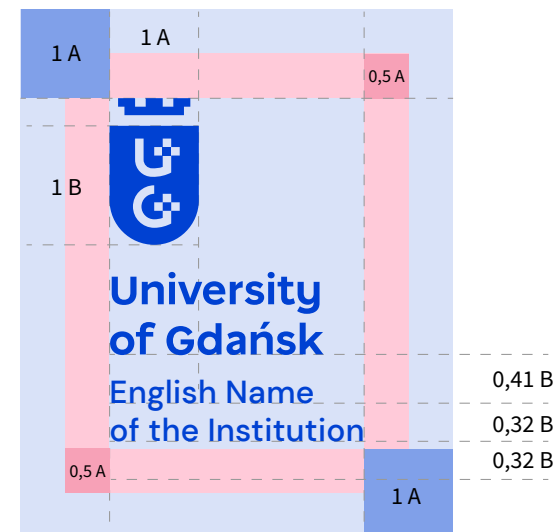

It is not allowed to expand the text frame intended as an area for entering the name.

The clear space shall be determined in the same way as for the version without annotation. The edges of the Logo's border and the annotation should be taken as the base field. See pages 26-31 for more on creating a clear space.
